Eloquent Missionary Is Given Jeep, Five Bikes as She Sails

BOSTON. —An eloquent 58-year-old missionary was on her way back te Africa with a jeep station wagon and five bicycles to help native pastors spread Christianity through the bush.

Miss Mary W. Hurlbut of Sedalia, Mo., procured the vehicles through the American Board of Foreign Missions, Boston, to speed up missionary service around Elende, West Africa — an area as large as New York state.

A Congregational Christian teacher there since 1924, she recently concluded a year's furlough.

Advance of Insects Stymied by Science

Man's Intelligence Termed Only Safeguard in Struggle.

LONDON. — The dinosaurs had their day, 60 million years ago, and fishes had theirs millions of years before that. Mammals had a golden age and today is the age of man, the highest mammal.

Many seers, professional and otherwise, have predicted that the next form of life to take over will be the insects. Only man's intelligence, so entomologists believe, stands between the decline and fall of mankind and the rise of bugs.

Dr. V. B. Wigglesworth of Cambridge university, one of Britain's outstanding entomologists, told a science survey audience, reassuringly, that scientists are doing their best to provide more efficient weapons in the struggle against insects. The basic element for eventual success, he warned, is knowledge.

"In the practical art of killing insects," he said, "there comes a time when we find that our basic capital of knowledge is exhausted. It is the pure sciences which provide that working capital."

New fields of inquiry are being opened up, Wigglesworth said.

Limitation Placed on Use Of New Drug, Streptomycin

NEW YORK. — Dr. John G. Kidd of Cornell university medical center told the New York Academy of Medicine that the new drug streptomycin often largely overcomes the form of tuberculosis known as miliary.

Although thousands of persons have this kind of TB, it is rare compared with the major form, which is lung tuberculosis. What streptomycin can do for the major disease is still unknown and hence puzzling.

Seven autopsies proved, said Kidd, that in the miliary form, bad spots on the lungs were healed. Sometimes, however, the patients relapsed and died of TB.

One possible reason was the ability of TB germs to change their natures and become resistant to streptomycin, Kidd said that in one case where two units of the drug had at first killed these germs, after a while they were not killed by doses 250 times bigger.

Large doses of streptomycin, he said, caused partial deafness of five out of seven of the persons autopsied.

Polio Vaccine Is Tested On Rats; Success Is Told

WASHINGTON. — Development of an infantile paralysis vaccine said to be capable of producing "a high degree of immunity" in a certain type of rats was described in the technical journal Science.

The report, describing the work of four Stanford university researchers, contained no statement as to any significance of the studies with relation to the digease in humans.

The vaccine was prepared with a strain of infantile paralysis virus experimentally developed in the cotton rat. After vaccination, 24 rats were exposed to doses of active virus. Only one of the 24 vaccinated rats developed polio—and it recovered. In contrast, among a similar number of unvaccinated rats used as "controls," 83 per cent de-veloped the disease. Three weeks later, the original 24 vaccinated rats were given another dose of active virus 10 times stronger than the original one. Only 33 per cent showed signs of polio. On the other hand, 92 per cent of a group of "control" rats developed the disease. Hubert S. Lorin, C. E. Schwerdt, Nancy Lawrence and Jane Collier Anderson conducted the research.

Missing Bit of Radium Found in Small Clinker

LONDON. — One three-thousandth of an ounce of radium, lost from a London hospital, has been found in a small clinker at a huge refuse dump 40 miles away.

Fearing that radiations might endanger public health, hospital and civic officials called in physicists who, by means of a detector of radio-active substances and x-ray equipment, traced the radium to the tiny slug in a dump a quarter of a mile long, 20 feet wide and 12 feet deep.

The radium, last used in the hospital's operating theater, was swept away with dressings and eventually with furnace waste.

Engineers Study Gas Consumption

Auto Makers Scan Means of Increasing Mileage For Motor Fuel

DETROIT, MICH.—Realizing that there is a tremendous waste of motor fuel in the U. S. each year, automotive engineers have started to do something about it by steadily increasing engine compressions.

As yet they haven't been able to devise a practical and economical way to get more mileage out of a gallon of gasoline in midsummer than in winter and wasteful driving habits still are going unchecked.

Although there are certain fuel adjustments which may be made in carburetors during the winter and summer, in most instances carburetors are fed as much gasoline in warm weather as they are in sub-freezing temperatures. The use of so-called "octane selectors" does not provide the solution.

Explore Problem.

At a meeting of the Society of Automotive Engineers it was proposed that dual carburetion systems be installed in future automobiles. Feeding high quality gasoline for cold starting and grade climbing and lesser quality for level surface driving would effect huge savings for automobile owners.

Experiments proved the practicability of dual fuel systems but the major setback is that they add materially to costs already plaguing the average motorist.

New engine heads the step up the compression ratio are one of the few advances in postwar automobile engines. There have been such things as improved engine mountings and other minor alterations designed to reduce vibration but increased compression appears to be the biggest step toward fuel economy.

Motorists Waste Gas.

According to engineers, millions of gallons of gasoline are wasted annually by the unnecessary use of high test or premium fuels in automobiles that derive absolutely no benefit from them. Not more than 20 percent of the 37 million vehicles on the nation's highways today require premium fuels, these authorities say.

Engine temperature control is among the other plans being considered to save fuel in winter driving. Also, improved distribution of fuel to the various cylinders of the power plant will save gas too.

It is unlikely, however, that new model engines this year will disclose more than increased compression as a fuel-saving development.

Fear Gasoline Rationing.

Many chieftains of industry believe that gasoline rationing would very seriously damage car and truck production and distribution. Some contend that widespread order cancellations would follow any major curtailment in the availability of automobile gasoline.

While many car dealers have refused to accept new orders and others have taken "informal" orders with no down payment, a considerable amount of money is tied up in down payments on unfilled car orders. Some industry sources estimate this amount at upward of $150,000,000. A sizeable part of this sum would be reclaimed by would-be buyers if fuel scarcities limited vacation drives.

Scientists Control Air Flight of V-2 Rocket

WHITE SANDS, N. M.—The army announced that American scientists succeeded in controlling the flight rath of a German V-2 rocket at the White Sands proving grounds.

Maj. J. B. Dickey, public relations officer, said the V-2 was kept under control by means of an electronic guidance system developed by a contractor for the army's ordnance department.

He reported that the rocket was maneuvered successfully in movement from right to left and up and down during its flight. It reached an altitude of about 70 miles.

Other officers at the proving grounds pointed out that a "beam guidance control" was used in early stages of V-2 tests but it merely maintained a desired flight path and did not maneuver the V-2.

During the war the Germans were able to have the V-2 rockets follow a predetermined course but could not control the missile in flight.

Trials Show Efficient Feeding of Molasses

Three series of trials using a total of 122 pigs were conducted to determine the maximum amount of cane molasses that can be utilized efficiently by pigs from weaning to a weight of 70 pounds. Rations containing levels of 10, 20, 30 and 40 per cent molasses were compared with check rations containing no molasses in the experiments at University of Hawaii.

The results indicate that, with the rations fed, 20 per cent is the maximum amount that will allow satisfactory gains and efficient feed utilization. Above this level of molasses both the rate of gain and efficiency of feed utilization decreases markedly.

AN ORDINANCE granting a Franchise To ..... its Successors and Assigns, to use the Streets and Other Public Places of the Town of Appomattox, Virginia, for its Poles, Wires, Conduits, Cables and Fixtures.

BE IT ORDAINED by the Council of the Town of Appomattox, Appomattox County, Virginia, that ..... its successors and assigns, for a period ofthirty (30) years to be and is hereby authorized and empowered to construct, maintain and operate its poels, poles, conduits, manholes, ducts, cables, wires and all other necessary overhead and underground apparatus on, over, along, in, under and through the streets, alleys, highways and other public places within the limits of the Town of Appomattox, in the County of Appomattox, and State of Virginia; and to use the property of other companies and permit other companies to use its property upon such arrangements as the two companies may agree; PROVIDED:

SECTION 1. That all poles erected by said Company shall be neat and symetrical, and shall be so located as in no way to interfere with the safety or convenience of persons traveling on or over the said streets, alleys, highways and other public places; and in the installation and maintenance of its underground system, said Company shall not open or encumber more of any street, alley, highway or other public place than will be necessary to enable it to perform the work with proper economy and efficiency.

SECTION 2. That the erection of poles and construction of conduits, under the provisions of this ordinance, shall be subject to the supervision of the Chairman of the Street Committee or some other representative appointed by the said Council, and said Company shall replace and properly relay any sidewalk or street pavement which may have been displaced or damaged by it in the construction and maintenance of its system.

SECTION 3. That space of one (1) crossarm of the poles erected or in one (1) duct of the conduits constructed, under the provisions of this ordinance, shall be reserved, free of charge, for the purpose of carrying wires of any fire alarm or police telegraph system owned and maintained by said Town, provided the said wires are placed and maintained in such a manner as may be prescribed by the said Company, and in no case used to carry electric light or high-tension currents.

SECTION 4. That the said Company shall maintain its lines in good and safe order and condition; and shall at all times fully indemnify, protect and save harmless the said Town from and against all claims arising from the erection, construction or negligent maintenance of its said lines.

SECTION 5. That nothing in this ordinance shall be construed to grant unto the said Company any exclusive right or to prevent a grant of similar privileges to other companies.

SECTION 6. This ordinance shall be in force from its passage.

TESTE: J. W. Cawthon, Clerk.

Adopted March 1, 1948
Approved March 1, 1948.

G. B. Buchanan, Mayor.

BE IT RESOLVED BY THE COUNCIL OF THE TOWN OF APPOMATTOX, Appomattox County, Virginia, that the annexed ordinance, entitled "AN ORDINANCE GRANTING A FRANCHISE TO ..... ITS SUCCESSORS AND ASSIGNS TO USE THE STREETS AND OTHER PUBLIC PLACES OF THE TOWN OF APPOMATTOX, VIRGINIA, FOR ITS POLES, WIRES, CONDUITS, CABLES, AND FIXTURES," be advertised once a week for four successive weeks in the Times-Virginian, a newspaper published in the Town of Appomattox, Virginia, and having a general circulation in the County of Appomatox; and that said advertisement shall invite bids for the franchise proposed to be granted in said Ordinance, which bids are to be in writing and delivered to the presiding officer of the Council in open session, to be held in Appomatox on the 12th day of April, 1948, at 7:30 o'clock, P. M., the right being reserved to reject any and all bids.

BE IT FURTHER RESOLVED, that the invitation for bids to be published with said Ordinance shall be as follows:

The Town of Appomattox, Appomattox County, Virginia, hereby invites bids for the franchise proposed to be granted in the following Ordinance, duly passed by the Council and approved by the Mayor on the 1st day of March, 1948, which bids are to be in writing and delivered to the presiding officer of the Council of said Town in open session, to be held in the Council Chamber in said Town on the 12th day of April, 1948, at 7:30 o'clock, P. M., the right being reserved to reject any and all bids.

Be it further resolved, that the successful bidder shall pay the cost of advertising the franchise.

Adopted: March 1, 1948.
Approved: March 1, 1948.

G. B. Buchanan, Mayor.

British May Trim House Of Lords by 600 Peers

LONDON. — Conservative party sources said about 600 British peers may be created to overwhelm the House of Lords under reform proposals considered by Conservative leaders as counter to the Labor government's plan to curb the upper chamber's powers.

A committee of Conservative peers is considering a proposal to limit membership to about 200 lords with outstanding public service records.

Plane Crosses Ocean With Dead Motor; Bishop Safe

SYDNEY, AUSTRALIA.—An Australian flying boat, carrying 29 passengers and a crew of 6, landed here safely after flying 380 miles across the storm-tossed Tasman sea with one of its four engines dead. Among the passengers were Episcopal Bishop G. Ashton Oldham of Albany, N. Y., and his wife.

Railway Passengers Gassed And Robbed in Romania

BUCHAREST, ROMANIA. — A band of thieves put all the passengers in a railway carriage to sleep by using gas and robbed the night train from Bucharest to Iasi, the newspaper Natunea said.

When the passengers woke up at Iasi station they found all their baggage gone.

Rotenone Proves Effective For Cattle Grubs and Lice

Cattle grubs, sometimes called "warbles" or "wolves," and lice have been pests in various sections of the country for many years. Many cattle growers do not realize the extent of the losses caused by these pests.

The department of agriculture directs attention to the fact that the weakest link in the life history of the cattle grub from the standpoint of its resistance to control measures is while it is in the back of the animal. This is the time to kill it before it falls to the ground to develop into a fly which will lay more eggs to develop into grubs to infest more animals.

Three ounces of dust containing at least 1½ per cent rotenone should be rubbed into the hair of an animal at any time knots resembling marbles under the skin are to be found on its back. The treatment should be repeated every two or four weeks until all of these knots have disappeared.

Strong and Durable Wool
Wool has great tensile-resistance to pulling. Wool fibers can be bent backwards and forwards many more times than any other natural textile fiber before breaking. These natural qualities give great strength to the wool fiber. Wool's strength and resilience allow wool to stand hard use, thus making it very durable. Products from wool appear in heavy and light weights, as heavy clothes and felt, or as light, soft materials. In either form it is durable. Clothing from wool gives protection without great weight. Some wool fabrics are as light and soft as down. The use of summer clothing made of wool as well as blankets and baby clothing has incresed in recent years.
